FORD

From as early as the "K" registration escort Fords have the PATS (passive anti theft system) fitted which is essentially a chip in the head of the key which is matched with and then recognized by the ECU (Engine control unit) each time the key is turned in the ignition. This allows the immobilizer on the vehicle to be switched of and then start.

If you lose your key or require another as a spare, then this will need to be done at the vehicle with specialist equipment or a master key if one is available.

We can cut and program keys to your Ford even if all your keys have been lost and also erase the old ones for added security

Please call for a quote or any if any information is required
